Profile Summary

Backend Developer with 4+ years of experience building and optimizing scalable backend systems using Python and Django. Contributed to system architecture improvements, and observability pipelines using Prometheus and ELK. Experienced in developing asynchronous services and supporting high-availability production environments. Strong focus on performance, reliability, and clean system design.

Professional Skill

- Django/Python
 - Pytest
 - Docker/Kuber
- SQL (Postgres / MySql)
 - Redis/Kafka
 - System Design
- Ansible
 - CI/CD (Github / Gitlab)
 - Event-Driven Architecture
- Grafana & Prometheus
 - Elastic Search (elk / apm)
 - Clickhouse

Work Experience

Tabdeal | Tehran | Backend Developer & SRE

2024 – Present

- Led database architecture refactoring for a platform serving 6M+ users, improving scalability and recovery reliability
- Designed and implemented a ClickHouse-based analytics pipeline with Redis caching to reduce load on transactional databases
- Built observability infrastructure using Prometheus, Grafana, and ELK, reducing incident detection and debugging time by 25%
- Optimized high-load services through query tuning, asynchronous processing, and Kafka-based event workflows
- Designed alerting and health-check mechanisms to improve service reliability and incident response
- Automated infrastructure and operational workflows using Ansible, improving deployment consistency and reducing manual effort

Homeca | Tehran | Backend Developer

2024/02 – 2024/08

- Automated accounting and cost-calculation workflows using Python and MySQL, improving accuracy and reducing manual operations
- Developed parallel processing pipelines using Celery, Redis, and OCR for medical test image processing
- Collaborated with cross-functional teams to design and deliver scalable backend services using Django and REST APIs
- Improved API structure and consistency across services
- Optimized database queries and indexing to improve performance
- Improved system responsiveness by offloading tasks to async workers

Sedreh (Khodnevis) | Tehran | Backend Developer

2023/06 – 2024/01

- Designed modular backend architecture with reusable components and test coverage
- Built asynchronous APIs for external integrations, reducing I/O bottlenecks
- Developed stateless services to support scalable, decoupled systems
- Improved code reliability by adding automated tests and validation layers
- Collaborated with frontend and product teams to deliver new features and improve API consistency

RasadPayesh Tehran Backend Developer	2023/08 - 2025/01
• Developed a custom search DSL on top of Elasticsearch to enable advanced article search with relevance scoring and similarity matching. • Maintained on-premises infrastructure services, using Ansible to enforce infrastructure as code and a declarative configuration model, while leveraging Kubernetes orchestration to improve reliability and prevent failure scenarios.	

Homeca Tehran Backend Developer	2021/03 - 2023/04
• Designed modular and reusable backend architecture with test coverage • Developed asynchronous APIs to reduce I/O bottlenecks • Built stateless, service-oriented components for scalable systems	

Education

Bachelor of Software Engineering	2024 - Present
---	----------------

Islamic Azad University (Electronic Unit)

LPIC 1 & 2	2024 - 2025
-----------------------	-------------

Cando IT School
